The SLK software release consists of two parts:

- the SLK package, a Java package with the basic SLK dynamic protection mechanisms, and
- the SLK/Jigsaw 1.0alpha3 Servlet Extension.

The SLK Java package contains some basic dynamic protection mechanisms for fine-grain sharing. Click here to download the zipped package.

The SLK servlet extension augments the Jigsaw HTTP server with servlets functionality based on the Jeeves 2.0 API. Protection across the Jigsaw and the servlet boundaries is attained using various kinds of SLK wrappers.

To use the SLK servlet extension, you need to first download W3C's Jigsaw version 1.0alpha3. Then click here to download the zipped extension, and include it in the classpath when running Jigsaw.
