

This is an application in response to the postdoctoral position at Indiana University, Bloomington, IN, in Sciencejobs.com. I have background in biochemistry/biophysics, protein chemistry and techniques used in molecular and structural biology. I have experience and interest in studies pertaining to structure function relation of proteins, structural biology pertaining to protein-protein interaction, protein-nucleic acid interactions, protein folding and unfolding, enzymology and structural aspects of macromolecules. I am interested in studies pertaining to clinical biochemistry, microbiology, immunological studies, cell signaling, cell physiology, cancer research, virology and structural function relation of proteins/enzymes and molecular structural biology leading to development of novel drugs and therapeutic agents to treat human diseases. I am flexible about my approach in learning and using new techniques of molecular and structural biology in research for human endeavor.

I am sending my CV as attachment file for your kind perusal. I hope I will get a chance to work at your institute.

With warm regards,  
Shabir
