

TO WHOM IT MAY CONCERN

Dear Sir,

Kindly refer the following recommendation in favor of Dr Dahiya who has applied for post doctoral position in your laboratory.

It gives me pleasure to write recommendation letter for Dr Neetu Dahiya who has applied for post doctoral position in your institute. I have known her closely for more than three years while she was pursuing her PhD in the department (August 2001-January, 2005). I found her highly motivated and hard working student who does not any barrier in research. She excelled so well in microbiological techniques in short time that it was difficult to judge that she has done her post graduation in Botany. One of her strengths is his belief in himself and relentless perseverance. She picked up fundamentals of research with minimal guidance and was able to relate them with the concepts and knowledge of the subject. As a result she made remarkable progress in her project. This quality was greatly visible during his research studies with difficult challenges, but with his dedicated effort he designed his experiments differently and modified the previous ones and obtained concrete results setting a stage for applied studies. She has tremendous aptitude for research and learning newer techniques. She has an inborn ability to comprehend the problem and analyze it judiciously. She is highly methodical in her approach and has sound mind besides being intelligent and very hard working. She has nice pleasing personality and can very easily get along with colleagues in laboratory. She always commended high respect in the laboratory because of her harmonious nature and was always working as a team helping his other colleagues in their research. She was well versed with the research carried out by the other members on the laboratory. She is dependable and reliable. She can be an asset to laboratory where ever she goes. Many research papers with his findings are already published in many peer-reviewed international journals. I do not have any hesitation to recommend her for any laboratory engaged in active research in life sciences. She is a highly motivated person with excellent communication skills. I strongly recommend her for the Post doc program at your institute and wish her success in life and in her endeavors.

R.P.Tiwari,

Chairman,

Dept of microbiology,
