

Part of my Ph D project written in English has been published on Gynecologic Oncology [2003, 90(2):238-244] and could be found in SCI(IF2.3). Another article written in English has been submitted to Cancer Gene Therapy. I'm from abroad---China. I don't know if you had heard of this beautiful country. Since I have built up many years of research experience and strong background in molecular biology, I am confident I will work successfully in a team environment under your supervision. I believe my very strong molecular and cell biology coupled along with a strong desire to acquire additional skills will go a long way to facilitate your work. I am bringing the enthusiasm to learn, receive training on new skills and research directions and fill up knowledge gaps that may exist. I am prepared to adapt to new research initiatives and directions ultimately leading to the goal of reducing the scourge of cancer and infectious diseases. I hope to make new advances thereby do some contributions to the health of human life.

Please find my resume and the names of three references as attached. If you need any more information, please let me know. I would be grateful if you could give me this challenging chance. I'm looking forward to hearing from you soon.
