**Reference for Ms. K. Muhamuda**

I am writing to you to express my support for Ms. K. Muhamuda in her application for a postdoctoral position in your University.

I have known Muhamuda for approximately five years. I have been associated with the department of Neurovirology right from the inception of the department 20 years ago. I have had the opportunity to interact with PhD students including Muhamuda on various occasions, during the actual work procedures, discussions, journal clubs and seminars through out her study in the department. She has completed her dissertation work on the topic "Production and characterization of monoclonal antibodies against rabies viral protein and their utility in immunodiagnosis and immunotherapy" in the month of December 2005.

It has been pleasure to know Muhamuda during this period she has worked very hard and sincere for her doctoral work. She has been very meticulous and has considerably put lot of sincere effort to explore in depth the subject in which she has done her dissertation. She has pleasing manners and also has very good inter personnel relationship with colleagues, students, faculty and mentors in the department of Neurovirology and Neuromicrobiology. She is competent to design and progress in further research work independently. She has good team spirit and would be a good asset to any laboratory in the field of virology and microbiology and I am sure she will contribute a lot in these fields where she works and I recommend her for the post doctoral position in your group.
