Dear Dr.,

I'm glad to recommend Mr. Qi Zhang applying a postdoctoral position in your lab.

As a supervisor of his graduate study in Ph.D. degree, I have known Mr. Zhang for about 6 years. In 2003, Mr. Zhang entered my lab. His study focuses on *Non-enzymatic Fast Repair of DNA Damage in Cells*. He always thought about and sufficiently prepared his experiments, and finally completed his task perfectly. In his study he demonstrated firstly the non-enzymatic fast repair mechanism not only exists in chemical system but also may exist in cells. Therefore he wrote research papers with keen insight and depth. Mr. Zhang is a creative person in scientific field, and has grasped the basic knowledge and the practiced skills. He published some papers and submitted some manuscripts to international journals. He is well organized with much efficiency. He enjoys research very much and works very hard, and obtains data which is reliable and of high quality. In addition, he has an extremely pleasant personality and is able to work well and co-operatively with others. Therefore, I would recommend him for a postdoctoral position in your lab. I am sure that he is worthy to be considered.

Sincerely yours,

Rongliang Zheng

Professor of Biophysics

School of Life Sciences

Lanzhou University, 730000
