Dear Prof. Bogdan Dragnea and Prof. James A. Glazier:

I am very pleased to learn on "ScienceJobs.com" that your lab has an opening postdoctoral position. My experience in molecular biology and educational background support my belief that I have the qualifications you are seeking.

I earned my Ph.D. degree in Oncology from Second Military Medical University (SMMU) in Jul 2001, being knowledgeable about molecular biology and cancer gene therapy after five years of training and experience. Subsequently, as a faculty member at SMMU and Shanghai Human Antibodomics Institute, I have applied my strong knowledge of MOLECULAR BIOLOGY to several original research projects. For instance, the functional study of several replicative senescence-associated genes that I had isolated by SSH; the mechanism investigation of how several oncogenes and tumor suppressor genes regulate telomerase activity; cloning and validation of fully human antibody genes, and so on. Years of experience have also helped me develop the independent research ability, communication skills, and collaboration spirit among team members.

With a strong knowledge of cellular and molecular biology, I am certain I could make a positive contribution to your projects.

My resume is enclosed. I would appreciate an opportunity to discuss my qualifications in a personal interview. I can be reached at yangqing2004@hotmail.com or 86-21-65339491 at your convenient time. I look forward to hearing from you in the near future.

Thank you for your time and consideration

Sincerely,
Qing Yang
