

I send you this letter with the hope of getting a postdoctoral position in your esteemed laboratory.

I am currently working on the design and modification of adenovirus for targeting gene delivery as a postdoctoral scholar in the Scripps Research Institute. When I worked in the Institute of Virology, China CDC, my project was to identify optimal human CpG ODNs and delimitate its immune stimulatory mechanisms as vaccine adjuvants. In addition, I also have a strong background in immunology and basic medical science because I got my Ph.D majored in Immunology. During that time, my research focused on the engineering antibody.

Since I have a lot of working experience in molecular biology, virology and immunology, I have confidence in my ability to make contributions to your research projects if you kindly give me a chance to work in your lab. I am looking forward to an opportunity to discuss with you further. Thanks for your consideration.

I am eager for your reply.

Best regards,

Jiali Li
