To whom it may concern,

I am pleased to write this letter of recommendation for Mr. Yang, who is my doctoral student and studied in my laboratory for about six years.

Xiao-jan Yang studied under my direct supervision at College of Life Sciences in Wuhan University for a period of six years since September 2000. In this period, I have pleasure of seeing his development from a beginner, into an excellent biological researcher.

I was quite impressed by his organized work efficiency and positive work attitude in these years. Yang always completed all the work assigned to him in earnest on time. Now, he has many working experiences in molecular biology, cell biology, as well as the ability to design research scheme. And he has also a good presentation skill in English, which profited from his long-time and extensive reading the scientific articles and independent writing papers in English. Furthermore he can cut through a mass of convoluted scientific detail to appreciate the essence of a problem and devise elegant, simple means of finding answers.

Yang is talented, hard working, knowledgeable and dynamic young scientist. He was frequently able to come up with some innovative approaches in his research area. And his research on the biological functions of HCV NS2 protein in mammalian cells is beneficial to his careful observation. In my opinion, Yang has the potential in the biological research, which can be further developed. According to Yang's previous achievements in Wuhan University, I am firmly convinced that he will make a wonderful researcher someday. I recommend Yang without reservation and shall appreciate your favorable consideration of his application. If you would like further elaboration, feel free to call me at (86)-27-68752372.

Sincerely yours,

Lin-Bai Ye
