

Personal recommendation

Dear Mr./Ms:

My name is Zheng Ji Ping, PhD of genetics, a teacher of microbiology and immunology, Department Head of Biotechnology, College of Life Science and Agriculture, Hainan University(Haikou China). I want to apply the research position you has posted.

I have about 15 years of practical experience in molecular genetics, microbiology and immunology, and have a very strong background in molecular cloning, gene expression, transcriptional regulation, protein purification, genomics / proteomics technology, animal experimentation, enzymatic and immunological assay. Resent years my interests focus on gastroenterology and immunology of infectious diseases. During my PhD period, my research focuses on the development of multivalent vaccine using live, attenuated bacteria as carriers of antigens from heterologous pathogens. I developed a vaccine against ETEC by expressing five antigens CFA/I, CS6, CS3, LT, ST in *S. flexneri*. Such work was excellent. After my PhD stage, I focus on the development of an effective vaccine against *Streptococcus suis* capsular type 2, ST resistance to colon cancer, and the mechanism of May-Hegglin anomany, a rare human inherited autosomal dominant disorder. More than 14 papers and a book have been published, and some honors also been award for my science work.

I realize you may not be making a decision immediately. But I think I am the right candidate who you want to need if there is an available research position in your department. I wanted to apply early rather than miss the opportunity. I hope you will review my application when you do make your decision.

Thank you again!

sincerely,

Ji-Ping Zheng
