NPAC Proposal to Carrier Intranet RFQ

This is a on–line version of NPAC's Proposal to Carrier Intranet RFQ, with focus on the demonstration of two key approaches proposed by NPAC:

- A RDBMS based Information system for
  - Document Control and Management(Restricted access)
  - Document Search and Access
  - System Maintenance and Administration (Restricted access)
- A Web–based User Interface for
  - Document Distribution over Intranet
  - Document Viewing and Printing
  - On–line Help and User Feedback

This propsal consists of 12 sections, each describes NPAC's detail proposal to the RFQ. Associated with each section, some simple demos are provided to illustrate the concept of the proposed solution and to demonstrate NPAC's experience and capability in the area. Because the RFQ calls for an integrated information system, we believe that through this on–line submission and demonstration, our position can be best represented. Major components in the technical solution include:

- System Architecture
- Security
