High Performance Fortran Applications (HPFA)

This is the CRPC and NPAC collection of material to help USE and APPLY High Performance Fortran (HPF), a portable scalable variant of the Fortran language which can be expected to run well on current and future high performance (parallel) computers.

This Internet resource is designed from the user point of view to understand which applications are suitable for the language and to give examples and other educational material to help new users. We also expect it will help compiler builders and language designers.
