```
I return late this afternoon and am in Syracuse MTW. I leave Thursday
morning for Canada -- and will have very limited online or work time thru
the weekend.
I agree with Rose (and previous comments [by myself and] Gregg) that the
proposal--even more, so far, than the preproposal--is very technical.
There should remain some technical sections suitably labeled, but the main
path should be user friendly for nontechies--perhaps by "telling a story"
[in the future]. I once saw a nice futuristic story that you wrote (few
years ago -- online). I wonder if you could adopt some of that powerful
style here -- i.e. assume our cdakn exists and then say what life would be
like for the inclusive distributed community taking advantage of the
cdadom and cdakn. The proposal could start and end with this theme and
have some techie sections in the middle that readers could choose to skim.
Later,
Ed
