Fractal Bibliography

The following is a list of references on fractal mathematics and computation, with special emphasis on fractal image compression. The listing is diverse; entries are from academic journals, conference proceedings, student dissertations, internal reports, and the popular press. Entries preceded by an asterisk denote works that are *in the footsteps of Jacquin*. Entries preceded by a tilde denote works that combine fractals and wavelets. Entry identifiers that terminate with a period (e.g. "Abdallah94.") are those of which I have copies. Those without a terminating period — please take care, their confidence level is not 100%.

This document is dated July 1, 1995. An electronic (and possible newer) version is available through anonymous ftp at links.uwaterloo.ca:/pub/Fractals/Papers/fractal.biblio.ps. Some of the papers listed below are available in postscript form from this ftp site. These are indicated as underlined entries.

Corrections and additions to this bibliography are always welcome. We also encourage the submission of preprints and reprints of fractal related papers. Send mail to jmkominek@jeeves.uwaterloo.ca (John Kominek).
