MOUNTAIN VIEW, Calif. - May 23, 1995 - Furthering the relationship between two of the most prominent companies supplying tools and solutions for the Internet, Netscape Communications Corporation and Sun Microsystems, Inc. announced today that Netscape intends to license Sun's Java programming language to implement in the Netscape Navigator browser.
The Java language, the result of several years of research and development at Sun Microsystems, is the first to provide a comprehensive solution to the challenges of programming for the Internet, providing portability, security, advanced networking and reliability without compromising performance. Netscape Navigator will be able to download small Java software programs, called applets, which run on the client system.
