# HTML Editors

This is a list of editors of HTML documents.

- Browsers
  - Easy HTML is a server-side structure editor for HTML that uses the forms capability of WWW Browsers as its interface. As you write your document, Easy HTML presents you with the portions you've completed so far.
  - NeXTStep HTML editor - WYSIWYG.
  - tkWWW for X Windows. is a browser that supports HTML editing.
- Unix
  - .exrc - File with vi Macros for writing html. (save it into your home directory as '.exrc') tkHTML based on tk/tcl, has WYSIWYG previewing to enhance its editing environment. Links to tkHTML home page
  - Emacs
    - Emacs HTML mode (`html-mode.el`): Supports Lucid Emacs menubar and font-lock capabilities; runs under GNU Emacs v18 and v19, Epoch, and Lucid Emacs. Here is online documentation.
    - A version of html-mode.el has been modified to work better with Emacs 19 by Jim Davis.
    - An improved version of html-mode is html-helper-mode by Nelson Minar.
    - hm--html-menus is another package based on html-mode.
    - psgml - is a major mode for editing SGML documents. Using HTML DTDs, this may be used to edit HTML documents.

    htmltext an editor based on the Andrew Toolkit.
  - HTML Editor is an HTML Editor for Nextstep systems which includes support for building forms, inserting character entities, and the complete HTML tag set. It can now call a Web browser providing a WYSIWYG preview mode.
- Macintosh
  - Simple HTML Editor for HyperCard.
  - HTML Edit for the Macintosh.
  - HTML Editor for the Macintosh (might be the same thing).
  - BBEdit and HTML Extensions.

    The Web Project at Universitat Jaume I in Spain has developed HTML extensions to the popular Mac editor "BBEdit".
  - HTML Editor is a WYSIWYG (or nearly WYSIWYG) HTML Editor for the Mac.
  - WebSpinner is a prototype semi-WYSIWYG WorldWideWeb page editor
- DOS/Windows
  - MS Word for Windows
    - GT_HTML.DOT; HTML editing in MS Word for Windows from GTRI
    - ANT_HTML.DOT is a template designed to work within Word for Windows 6.0 to facilitate the creation of hypertext documents.
    - A simple MS Windows HTML Editor by Steve Hancock. Here is the *README* file.

        - MS Word for Windows Macros. Also known as `gt_html.zip`, this is an untested (by me) package of Macros to bring HTML editing to MS Word for Windows. More details can be found at Georgia Tech's Web Server
        - CU_HTML.DOT a document template for Word for Windows 2.0 and 6.0. It can display inline GIFs inside the document, and let you insert hyperlinks, etc.
        - SGML Tag Wizard makes MS Word for Windws into an interactive SGML and HTML editor.
        - Microsoft Word Viewer and Internet Assistant will let you save the document in HTML format. In addition it will allow you to use Word as an internet browser
    - WordPerfect to HTML is a set of WYSWIG templates for WP5.1 or WP6.0 that allow WP documents to be prepared for HTML. They supposedly also allow conversion of non-HTML documents to HTML format.
    - HTMLed for MS Windows
    - HTML Assistant - an editor for MS Windows (which is written in Visual Basic) will (among other things) convert the menu items in the Mosaic.ini file to an HTML file.
    - HTML Writer - an editor for MS Window.s
    - SoftQuad HoTMetaL for MS Windows and Sun/SPARC Motif.

### Image Map Editors

This is not an HTML topic, but it is about editors. There should probably be a separate page for image maps.

- Mapedit can be used both to create new imagemaps and to edit your existing imagemaps.
- Hypermap does the same for HyperCard on the Macintosh.
- MapMaker is a tool for generating clickable image maps for use with HTML browsers. It requires TCL.

### Other Lists of Editors

- Browsers, Viewers and HTML Preparation Software
- Yahoo HTML Editors

## HyperNews Responses

1. Image map editors NOT a HTML topic .. why ??? (John W. Kulp)
    1. Not strictly (Daniel LaLiberte)
