PAUL D. CODDINGTON

EDUCATION:

1983-88: Ph.D. in theoretical physics, University of Southampton, U.K.

1979-82: B.Sc. with first class honours in physics, double major in mathematics, University of Western Australia, Perth, Australia.

PROFESSIONAL EXPERIENCE:

1992-present: Research Scientist at the Northeast Parallel Architectures Center, Syracuse University.

- Leading a project to develop a real-time parallel renderer for digital terrain models, for an educational application involving an interactive flight simulation.
- Leading an NSF-sponsored Reseach Experiences for Undergraduates Program in High Performance Computing and Communications.
- Led a project on the use of parallel computing in the power utility industry, which included porting existing code to parallel computers and developing parallel algorithms for sparse matrix computations and differential-algebraic equation solvers.
- Development of parallel algorithms for graph coloring and connected component labeling, random number generators, optimization techniques, and Monte Carlo simulation for various computational physics problems, in conjunction with the National HPCC Software Exchange and High Performance Fortran Applications projects.
- Involved in various applications of the World Wide Web, including Kids Web, a Web digital library for schoolchildren.

1990-92: Research Associate in the Physics Department, Syracuse University

- Developed sequential and parallel Monte Carlo algorithms for simulations of spin models of magnetism and random surfaces models of quantum gravity.
- Studied the use of networks of workstations for parallel computing.

1988-90: Research Fellow in the Physics Department, working in the Caltech Concurrent Computation Group, California Institute of Technology, Pasadena, U.S.A.

- Developed parallel implementations of Monte Carlo cluster algorithms for spin models of magnetism, including parallel connected component labeling algorithms.

1987-88: Research Assistant in the Concurrent Computation Group of the Department of Electronics and Computer Science, University of Southampton, U.K.

- Developed parallel algorithms on transputer arrays for various applications.
- Helped set up and run the Transputer Support Center, a campus-affiliated training and consultancy center, and helped develop demonstration programs and training courses.

1986-87: Research Assistant in the Physics Department, University of Southampton, U.K.

- Developed parallel algorithms for transputer arrays to perform numerical studies of problems in quantum field theory and condensed matter physics.

TECHNICAL EXPERTISE

10 years experience in high-performance parallel computing. Parallel computers used include the Encore Multimax, Sequent Symmetry, BBN Butterfly, ICL and AMT DAP, Thinking Machines CM-2 and CM-5, Maspar MP-100, Meiko Computing Surface, nCUBE/10, nCUBE/2, Intel iPSC, Symult S2010, Intel Touchstone Delta, IBM SP-2, as well as networks of Sun, DEC, IBM, and Hewlett-Packard workstations. Experienced with Pascal, Fortran 77, C, perl, DAP Fortran, *Lisp, CM Fortran, C*, Fortran 90, High Performance Fortran, occam, Express, MPL, MP Fortran, HTML.
