

# Introduction

---

This proposal presents pricing for a Design Domain™ for the Training Web Site enhancement to the [www.carrier.com](http://www.carrier.com) website.

The information presented here is in three sections:

1. The [LevelSet document](#) takes the information from the CTT Internet Team's memo of November 20 and presents it as a two two-level list of site functions:

**Level Zero** (base) functionality includes the static web page design, online registration, and options to download pdf files of catalogs.

**Level One** (enhanced) functionality adds online ordering (with callback for credit card confirmation)

2. The [TimeFrame section](#) discusses the creation of a time-based project management document, similar to a Gantt chart, that will be helpful in managing the progress of the project
3. The [Design Domain proposal](#) is an expansion of our February 4 proposal, and describes the production of a site where all web page development is coordinated.

To explore these three sections in more detail, click on the tabbed sections on the right navigation bar; there's also a [help page](#) that will familiarize you with the design and navigation in this document.
